AX-TOOLBOX SCORER: GETTING STARTED

Initial observations

an event can have one or more competitions. Pilots can participate in one or more competitions. A competition may consist of all or part of the tasks.

At any time, *Event>Save* to save all the information, *Event>Load* to recover. *Event>Save to XML* is only for debug purposes to see what is stored.

To import data from a .CSV file, use *Event>Load CSV file* or drag and drop the file over the window.

Any change takes effect immediately except in the publication of results. You should save the event information often, and if you mess it up, recover the last recording.

How-to

1. To edit the event information: *Event>Edit*. You should save the event here. All the pdf output generated later will end in the same folder you save the event.
2. To edit the list of competitions: *Competition>Edit*. Add to add new competitions, right-click*>Remove* to remove the unwanted ones.
3. To edit the list of pilots: *Pilots>Edit*. Add to add pilots one by one, right-click*>Remove* to remove them.
4. To edit the list of pilots in each competition, right-click *on the desired competition list on the left>Edit competition pilots*. Right-click *over the pilot>Remove* to remove the pilot. You can not add pilots here. Use paragraph #3 instead. If you mess up and delete the wrong one, right-click *on the desired competition>Reset competition* pilots resets the list with all the event pilots and you can start again.
5. To edit the list of tasks of the event: *Tasks>Edit*. Add to add new tasks, right-click*>Remove* to remove them.
6. To edit the list of tasks for each competition, follow analogous instructions as paragraph 4.
7. To edit the task results: *right-click on the desired task from the list on the left>Edit task results*. There are some special values: "-": pending measurement or no manual measurement (it will be used when importing results from FlightAnalyzer), "NF": no flight, "NR": no result. *Randomize* to get random measures and penalties for test purposes. When you are finished editing, click *Save*. An "M" will appear beside the name of the task. It indicates that there is a manual result. If there were previously computed task scores, am "*" will appear after the "C" indicating that the scores must be computed again.
8. To compute the task scores: right-click *on the desired task from the list on the left>Compute score*. A "C" will appear beside the name of the task. It tells that the scores are already calculated. It will compute a score for each competition.
9. To produce listings: *Output menu>whatever you want*. Everything will produce one or more pdf files stored in the same folder of the event.
10. To change manually a score version/revision date: *right-click on the desired task from the list on the left>Change status*. The program will keep track of changes between official versions and highlight the changes (rule 14.3.2.e).

Steps 6 to 10 can be repeated as necessary.

Example of .CSV file

Read the Data Exchange File Format document for more info.
